Inventory Management System for Small Businesses

Project Progress Report

Project Overview

The Inventory Management System for Small Businesses is a web-based application designed to help small business owners efficiently manage their inventory, monitor stock levels, organize suppliers, and generate reports. The system aims to provide a centralized platform for inventory tracking and business decision-making through a modern and responsive interface.

Current Project Status

Overall Completion: 70%

The core structure of the system has been developed, and most of the major modules are functional. However, several advanced features are still under development, and the Firebase cloud integration has not yet been fully configured and tested.
